GRUB CONTROL	5 ¼	5	4 ½	3	12

Note: These are approximate settings. Age, condition, and rate of travel (walking speed) can affect settings. Always calibrate your spreader before using.

Tips:

1. Wait 5-7 weeks between nutrient application (Fertilizer) to avoid burning your lawn.
2. Sweep away any product that lands in the driveway, sidewalk, or street, back onto your lawn.
3. Read and follow label directions for best results. Some products should be watered in after application to activate and others should be watered prior to best control certain weed species.
